COMPACT DIMENSIONS
FRONT LOAD WASHERS

FEATURE
COMPACT DIMENSIONS
The Speed Queen washer features a full-size tub that can fit into tight spaces. Many competitors have increased the depth of their machines, so they no longer can fit into smaller laundry closets.

ADVANTAGE
WORKS IN SMALLER APPLICATIONS
The Speed Queen front load washer and stack washer/dryer are designed with a 27-3/4” cabinet depth and only require 31-3/8” of space for full installation. This allows it to fit in tighter spaces where other full-size washers exceed the dimension requirements.

BENEFIT
MORE CAPACITY IN TIGHT SPACES
The Speed Queen front load washer’s unique dimensions allow customers to use a full-size washer and dryer in smaller areas that would otherwise require a compact laundry set. The customer gets the benefit of washing large 22-pound loads and bulky items such as comforters even though their laundry has limited space.

EXAMPLE
A customer comes in looking for a replacement for their broken stack washer dryer. The dealer down the street told them the only option was a compact washer and dryer, due to their space restrictions. Washers and dryers have increased in size since they purchased their last machine. The customer is replacing a full-size washer and would prefer to replace that unit with a full-size. The Speed Queen stack unit will fit in the same space, because of its slim dimensions and offers the customer a full-size front load washer. As an added bonus, the Speed Queen offers a 25-year life with a 5-year parts and labor warranty.
